Summary Goal-oriented developer with proven ability to leverage full-stack knowledge to build interactive applications that deliver exceptional user experiences.

WORK EXPERIENCE

Recruitifi

February 2026 - April 2026

Senior Software Engineer

Remote

- Developed and maintained full-stack recruiting platform features using React, Ruby on Rails, and PostgreSQL, delivering scalable, user-focused solutions for human resources.
- Engineered high-throughput backend APIs with Ruby on Rails, optimizing database queries and data serialization to reduce endpoint latency.
- Implemented comprehensive end-to-end testing suites using Cypress, significantly improving code coverage and reducing regression bugs in production releases.

Overnight

May 2025 - August 2025

Senior Software Engineer

Remote

- Led the design and development of scalable features for a collegiate streaming platform using React, FFmpeg, AWS, Express.js and PostgreSQL.
- Architected and implemented full-stack solutions by collaborating with cross-functional teams, building reusable React components, designing efficient PostgreSQL schemas, and ensuring reliable, secure, and maintainable software that supported Overnight streaming workflows.

TeamWorx Security

September 2021 - January 2025

Software Engineer

Columbia, MD Remote

- Collaborated with the engineering team, product, design, and QA to identify system vulnerabilities, refine security workflows, and construct an incident response mechanism.
- Worked with UI/UX design team to translate detailed mocks in Figma into pixelated React web pages and React Native mobile screens.
- Designed and maintained RBAC policies and access permissions for classified data.
- Developed and maintained comprehensive end-to-end (E2E) test suites using Jest and Playwright.

CarSwoop

August 2019 - October 2019

Junior Software Engineer

Santa Monica, CA

- Built and enhanced customer-facing web applications using React, Node.js, and Firebase, enabling reliable transportation and mobility services.
- Utilized MapKit JS to display mapping in real-time for the location of drivers in the system.

TECHNOLOGIES

Competencies: API Integration, Distributed Systems, Scalable Applications, Database Optimization, Backend Architecture, System Design, Cloud deployments

Software: Python, React, Angular, TypeScript, JavaScript, C#, Ruby on Rails, SQL, Java, AWS, GIT, Node.js, Express, Next.js, React Native, TailwindCSS, MaterialUI, PostgreSQL, MongoDB, ASP.NET, Tanstack, Zustand, Kafka, Playwright, MySQL, Jest, Cypress, Pub-Sub, Docker

EDUCATION

University of Massachusetts Dartmouth – B.Sc. in Mathematics

2011–2016
